# Notifications Activity

Simulator Task

INSTANCE STATUS		Your instance will expire in...	SIMULATOR SCORE
Running	<a href="#">Open My Instance</a>	14 Days 44 Minutes	70% passed
<a href="#">Terminate Instance</a>		<a href="#">Request Expiry Extension</a>	

**Task Result:** *Success*

Task validation successful!

## Create Notifications

The Software group needs to be notified when new software license contracts are created.

- Implement a Notification based on the following requirements:
  - Name: **Software License Contract Created**
  - Table: **Contract [ast\_contract]**
  - Category: **Contract Management**
  - Inserted: **selected**
  - Send the Notification only if the **Contract model** is *Software License*
  - Specify the **Software** group to receive the Notification
  - Begin the **Subject** line with '*New Software License Contract:*' and include both the **Number** and **Contract number** in the subject
  - Write your own **Message HTML**
- Preview the Notification to see how it would appear to the user.
- Create a new software license contract to test your Notification. You can verify your Notification was sent correctly using **All > System Mailboxes > Outbound > Outbox**. Fred Luddy is in the Software group.

-----

Upon completion of these tasks, select the **Validate Task** button. If the validation fails, refer to the recommendations for hints.

If you continue to have difficulties completing the activity, you can find additional hints by going to your Simulator Instance and navigating to the **Simulator Task Information > Notifications Activity** module.
